METHOD OF TEST

According to client's instruction manual, 1g Toro Origin was mixed with 0.4g water, and tested for the VOC. The sample was tested in the "as-received" condition.

1. Heavy metals analysis of Mercury (Hg), Lead (Pb) and Cadmium (Cd)

The sample was digested by inorganic acid, followed by analysis using Inductively Coupled Plasma Atomic Emission Spectroscopy (ICP-AES)

2. Analysis of Hexavalent Chromium (Cr⁶⁺)

The sample was analysed by UV-Vis spectrometer using 1,5-Diphenylcarbohydrazide as derivatizing agent.

3. Analysis of Hydrocarbon solvents, Halogenated solvents and Aromatic solvents

The sample was analysed by Headspace-Gas Chromatography with Mass Selective Detector (HS-GC-MSD)

4. Analysis of Ethylene glycols, Phthalates, Epichlorohydrin, N-methyl pyrrolidone and Halogenated benzenes

The sample was analyzed by Gas Chromatography with Flame Ionization Detector (GC-FID) and/or Gas Chromatograph with Mass Selective Detector (GC-MSD), after appropriate pretreatment of the sample

5. Analysis of Alkyl Phenol Ethoxylates

The sample was analysed according to BS3762: 1990 Analysis of formulated Detergent

6. Analysis of Formaldehyde

The sample was analysed by UV-Vis Spectrophotometer using Acetylacetone as reagent

7. Analysis of VOC

The sample was analysed according to BS EN ISO 11890-2:2006, Paints and varnishes – *Determination of volatile organic compound (VOC) content – Part 2 : Gas-chromatographic method*
